

Typical requirements / quotation template for a

Primary school hall

The following is a list and description of the equipment that we typically install in a "standard" primary school for gymnastic activities. However, with 40 years of experience installing fixed and portable equipment in primary schools, we know there is no such thing as a "standard" requirement – the profile of end-user requirements, budget constraints, any special needs, and the size of storage rooms all result in a requirement for bespoke equipment.

This template is designed to give you and us a starting point for the planning of your requirements. Please tick the checkboxes next to the items and complete the rest of the form as indicated, then return the form to us with the items listed below and we will provide a firm price for your requirements.

In order to provide you with a firm quotation, we would ideally like to receive architectural drawings of the hall into which you would require the fixed equipment installing. We are able to bridge radiators and windows with all our fixed equipment, but a drawing would help us to advise you on the optimal location for your chosen equipment.

If you have an existing building that you are equipping and do not have drawings, then please complete this form and ask a sales representative to visit to advise on optimal locations.
