

## SECURING ARRANGEMENTS FOR INDOOR GOALS – operation and maintenance

**IMPORTANT** It is imperative that indoor goals are anchored to prevent accidents which could otherwise be caused by the goals toppling.

1. Continental provides anchorage fittings into walls or floors for 5-a-side football goals and hockey goals
2. Each goal has a threaded socket centrally along the back of the crossbar. If floor anchorage is required this must be mentioned at the time of ordering for the eyebolts to be fitted into the side frames
3. An eyebolt is to be located into the socket on the crossbar and screwed in tightly
4. Steer the goal into position opposite the eyebolt protruding from the wall, and set up the goal ready for use. Align the eyebolt on the goal with that in the wall
5. From the eyebolt at the back of the goal extend the chain and snap hook to the eyebolt in the wall
6. Connect the snap hook to the wall eyebolt to secure the football or hockey goal

Regularly check all items for wear. If replacements are necessary contact Continental.

See recommendations in the Continental maintenance manual concerning regular maintenance inspections and reports.
