Impulse RR700 Recumbent Bike

Details

The RR700 Recumbent Bike from Impulse Fitness is an exciting full commercial machine that fits perfectly within any gym setting. Manufactured to the highest standard, the R700 series machines are ready to withstand the high use of commercial facilities like those in the local authority and independent health club sectors.

The bike has an optimised Q-factor (distance between pedals) which reduces the force on the knees and makes each pedal stroke as efficient as possible. Another important feature is the self-powered console which activates after a few pedal strokes and will stay awake until 120 seconds of inactivity passes.

The RR700's ergonomic handles with fast track controls allow the user to adjust resistance easily to ensure they are training at an appropriate intensity. As well as fast track controls, it features wrap-around seat adjustments and colour coded adjustment features to accommodate for all user demographics.

When trying to make sure your facility has high quality, reliable recumbent bikes that have been tried and tested around the world - the RR700 is a solution that perfectly fits the bill.

Features:

- Wrap-around seat adjustment allows for easy seat changes.
- Over sized cranks and two-sided pedals offers durability.
- Ergonomically designed seat handles.
- Step-through design allows easy entry and exit.
- Easy to service shroud and crank cover design.

PLEASE NOTE: This item is delivered flat-packed and requires some self-assembly. Please contact us if you require a cost for installation and commissioning in your facility
