Sports hall vertical divider net

Details

These vertically retractable nets have a 2.5m section of PVC material at low level as a visual and physial barrier between sides of the hall, but the fine polypropylene scrim / mesh above permits viewing through the curtain at higher level for spectators.

Available as standard with beige or blue/green PVC and with white or black scrim / mesh, the curtain is also available with bespoke colours of PVC at additional cost. Colour samples are available here: Vertical divider colour choice

The dividers operate using an electronic winch located in the roof space with a wall mounted control panel to raise and lower the curtain.

Operation is extremely smooth and the curtain rapidly raises, folding automatically as it does, into the roof space.

PLEASE NOTE: The images show a vertical divider net with a run of rebound screens below. The net can be stopped at the top of the rebound screens to permit five a side or similar activities using rebound, or the rebound screens can be removed and the net lowered to the floor

The video below shows a curtain installed by Continental at the Leeds United football training ground - this curtain is 45m wide x 11m high:
