Archery practice netting

Details

Continental sports can install archery practice netting in your sports hall in accordance with Archery GB guidance.

Typically in a sports hall this requires a full width archery net (a woven fine mesh net capable of stopping arrows) located approximately 1m away from an end wall, hung on aluminium trackway so that it can be stored to the side of the room.

When planning the location of archery netting, it is vital to consider the position of the netting with respect to doors to reduce the risk of accidents.

Please note that some higher power bows can shoot arrows through archery mesh so these bows should be avoided indoors. In any event, human activity must never be allowed to take place behind an archery net.

The images above show an archery net installed by Continental Sports at the new sports hall at the Lilleshall National Sports Centre - the home of Archery GB.

All installations are bespoke so please contact us for discussions as to your requirements and for a quotation.
