Springboard - mini foam take-off board

Details

The mini foam take-off board is ideal for the younger, lighter child.

At 80cm x 50cm x 20cm it provides a fun way to access equipment such as nesting tables, soft play shapes and movement tables.

Featuring a solid foam construction enclosed in a brighlty covered pvc cover with an anti-slip base. This board is designed for children who would be too light to generate a rebound from a standard springboard and the take-off board is therefore not sprung.

Easily carried by small children at just 3kg.
