

Park trampolines

Details

We have developed our 40+ years of expertise and experience of competition trampoline manufacture to develop the world's best system for trampoline parks. Our system is fully compliant with PAS5000 and you receive a PAS5000 compliance certificate on completion of the park build.

Continental's system includes innovative features unique to the industry:

- UltraMesh - a rip-proof, anti-slip top surface to our trampoline beds - the underneath redundant layer is genuine USA Permatron, the market leading polypropylene trampoline bed material
- Shorter springs - a bespoke spring developed to provide optimum performance in a shorter spring resulting in the narrowest pads and therefore highest proportion of jumping area in the industry
- Circular tubes - rather than risk users landing on the edge of a square metal tube under the pads, we use circular tube to remove those hard edges.
- Dual-sided tubes - our tubes have a redundant set of spring holes underneath the tube so after many years of use, as the spring holes wear, you can flip the tube over and start again with effectively a brand new tube.

Our standard park trampolines are squares on a 2.4m x 2.4m grid, with the beds themselves being 1.95m x 1.95m.

Our modular system permits bed lengths of any multiple of that standard unit length, so 2.4m x 4.8m, or 2.4m x 7.2m, or 2.4m x 9.6m etc.

All our beds have "no-jump" borders in a contrasting colour to the bed to show the safe jumping area (in compliance with PAS5000).

Bed colours:

- Black
- Grey
- Light blue

- Dark blue
- Red
- Green
- Any colour subject to a minimum order quantity

No-jump border colours:

- Bright blue
- Dark blue
- Black
- Purple
- Orange
- Red
- Yellow
- Lime
- White
- Any colour subject to a minimum order quantity

Pad colours:

- Any of our 22 colours of matt, leather effect double coated fire retardant PVC colours. Colours can be combined in any way or in any number of colours with no surcharge
