

Tumble tracks

Details

Our trampoline park system is modular with unit lengths of 2.4m (with a 2.4m width), so we can manufacture tracks for your trampoline park in any multiple of 2.4m, meaning your track can be 4.8m, 7.2m, 9.6m, 12m, 14.4m, 16.8m, 19.2m, 21.6m, 24m etc.

We can include tracks within a main jumping area - and in the past we have provided retractable netting to stop people moving from the main area onto the tracks when they are in use, or we can install tracks as a separate element for separate use within a park.

Tracks are available with angled end trampolines or with rest areas at the ends

For additional skills we can provide full length angled trampolines to both sides of the track to create a half-pipe track
