# Kids areas / junior park trampolines

## Details

Continental's standard park trampolines are based on a frame size of 2.4m x 2.4m, but we also manufacture trampolines to a frame size of 1.8m x 1.8m.

This smaller kids trampoline gives you the opportunity to incorporate a zone for smaller children or toddlers to play while larger siblings use the entire park. The trampolines are just as robust as our standard trampolines (and in some parks our customers use a zone of smaller trampolines for adult fitness classes).

Available in the same range of colours as our standard trampolines.

In your kids area we can also incorporate:

- soft playshapes
- ball pools
- padded creche areas
- balustrade with gated entry
- foam pits

Our modular system allows for the integration of these smaller trampolines within an area of larger trampolines as the frames are identical. A run of 4 kids trampolines is exactly the same size as a run of 3 standard trampolines - so a square kids area of 16 trampolines fits in the same space as a square area of 9 standard trampolines. That arrangement would enable segregation of the area for toddlers or fitness classes when required (using VaultBlox) or integration within the main jumping area at busier times.
