Balustrade and steps

Details

Continental manufacture balustrade from an epoxy powder coated steel framework with perforated steel panels - normally in black powder coating but available in any colour of your choice.

Handrails are lacquered pine circular rails.

This handrail and balustrade is fully compliant with UK Building Regulations

The perforated panels have large numbers of small holes which enable spectators to view easily through the balustrade panels, whilst being a virtually solid barrier to stop hands, arms and feet getting trapped.

Steps are made from a steel framework with plywood steps and risers. Covered in carpet to match your podium the steps are finished with high contrast nosings to comply with DDA requirements of Building Regulations.

Steps can be single width, or double width with a seperate half divider balustrade
