Socketed badminton post storage trolley

Details

This storage unit is the perfect way to store and transport up to five pairs of Continental's socketed badminton posts.

The unit has four heavy duty non-marking castors which enable the posts to be moved easily around your hall to speed up set-up and breakdown of the equipment.

The heavy steel base is fixed using angled brackets to the wheels to lower the centre of gravity ensuring the unit is extremely stable.

The integral handle is used when empty or with a small number of posts, but when the unit is full the user can simply push any of the posts to move the unit around.

As standard this unit is supplied epoxy powder coated in red, but can be supplied in any colour to suit your facility and to match the colour you choose for your posts.
