

# Basketball goals - Matchplay - wall fixed, upward folding

## Details

Wall mounted matchplay basketball goals with a single phase electric winch to hoist the goals to the stored position against the wall. These goals are ideal in situations where a clash with a viewing gallery, cricket netting, or other obstacle on the wall is to be avoided.

[Technical Information](#)

Available in projections from 1.2m up to 4.5m from the wall to the backboard. The "standard" projection of a goal in a 33m long hall with a 28m long basketball court is 3.7m.

The goal is hoisted using a wall mounted single phase electric winch which is operated by your choice of a remote control keyfob or a wireless battery operated wall fixed control panel.

Secondary steelwork is necessary (by others) to support these goals.

Options include:

- Matchplay size backboards (1.8m x 1.05m) in laminated timber or clear cast acrylic (acrylic is 100% recycled content with no virgin plastic)
- Ring type - standard basketball rings are fixed. However we also offer pressure release slam dunk-rings, both standard forward breaking or 180 degree FIBA approved dunk-rings.
- Backboard protection padding - we supply "bolt-on" TuffGuard
- Load arrestor - freefall safety device to prevent uncontrolled freefall of the goal in case of failure of the winch cable and both supporting steel chains.
- For basketball centres requiring FIBA certification, we are pleased to offer a version of these goals with tempered glass backboards and a FIBA 2 certificate.

The video below shows the goals moving from the play to the stored position - after just one click on the keyfob remote:
