Basketball goals - Matchplay - Wall fixed - Sideways hinged

Details

Wall mounted matchplay basketball goals which can be designed to fold away in either direction. Available in projections from 0.6m up to 4.5m.

Technical Information

The "standard" projection of a goal in typical sports halls is:

- 3.7m in a 33m long hall with a 28m long centrally located basketball court
- 4.45m in a 34.5m long hall with a 28m long centrally located basketball court

Stabiliser wires fixed to the wall at high level are required on goals above a projection of 3.5m to provide additional stability when in use.

The goal is opened and closed manually using a sash hook provided for that purpose and locked into the play position with a sprung loaded locating pin.

For all projections of 1.2m and over a high-strength magnetic keep bracket is incorporated to hold the goal securely in the stored position when the goal is not in use.

Options include:

- Fixed height or height adjustable - Fixed height or adjustable height boards are available. Adjustable height boards are suitable to provide junior or mini basketball as well as competition basketball - ring heights achieved by adjustable height goals are 3.05m and 2.6m.
- Matchplay size backboards (1.8m x 1.05m) can be timber or clear cast acrylic (our acrylic is 100% recycled content with no virgin plastic)
- Ring type - standard basketball rings are fixed. However we also offer pressure release slam dunk - rings and FIBA approved rings.
- Backboard protection padding - we supply "bolt-on" TuffGuard

For facilities wishing to play basketball at a higher level, we offer a FIBA Level 2 certified goal with tempered glass backboards
