

Cricket matting (STANDARD 11m LENGTHS)

Details

Indoor cricket matting is essential to protect your sports hall floor from cricket balls and mats and also to deaden the rebound from a sprung sports floor to provide a rebound closer to that of an outdoor cricket wicket. This matting provides an even pace wicket with true bounce providing both batsmen and bowlers with a realistic practice playing surface.

Manufactured from green nylon carpet, the matting has a bonded heavy duty ribbed synthetic rubber backing

The matting is supplied 2m wide and is as standard the rolls are 11m long to comply with ECB's TS3 guidance for use with indoor cricket in multi-sport facilities. The matting is also available in any other length you require - please contact us for a quotation.

We strongly recommend all cricket matting is stored on a wooden creel which is available at additional cost. The images above show the cricket matting rolled onto storage creels. The creel ensures the matting is rolled properly and protected when in storage and the integral handles enable the matting plus creel to be carried easily.
