

Competition training ladies balance beam - floor model

0128610XAA

Details

Ladies balance beam manufactured from the same body as the FIG model but fixed at floor height

The beam features:

- aluminium body with suedette cover
- foam cushioning layer
- low level metal feet with rubber caps for stability
- beam surface set at 240mm above floor level to provide a floor height beam for training purposes.
- standard competition beam body with cushioning
- competition 5m length

This beam does not include rubber end caps.

The beam is designed to sit on top of matting. However the feet for this beam can be supplied specially extended to position the underside of the beam 250mm above the floor so that 200mm thick landing mats can be accommodated around the beam. This sets the top surface of the beam 400mm above the sub-floor.

SKU	Options	Available Colours
01286I01AA	250mm	N/A
01286I02AA	400mm	N/A
