Ringframe retractable access platform

01271X01AA

Details

Auto-retracting, hydraulically assisted ringframe access platform to enable the gymnast to access competition height rings without the assistance of a coach.

The platform incorporates a gass strut so that as the gymnast steps off the platform to hold the rings, the platform folds back up automatically.

Available in two types:

- Ringframe mounted - supplied with U-bolts to fix the platform directly to the uprights of a ringframe
- Post mounted - supplied with a floor fixed post onto which the platform is fixed - this version is designed to be used with ceiling mounted handrings suspended over a pit

Ideal for rings located above a foam filled dismount pit where the coach cannot lift the gymnast up to the rings

SKU	Options	Available Colours
01271D01AA	Ringframe mounted	N/A
01271F01AA	Post mounted	N/A
