SPIETH - Competition uneven bars "Munich"

Details

FIG Approved

Uneven bars from Spieth designed for top level competition use. The bars are FIG certified for use at all levels of competition. Supplied with a pair of round, hollow bars manufactured from a fibreglass core with a natural "Fiberflex PRO" veneer. The bars are height adjustable in units of 5 cm and feature integrated castors

The bars incorporate a patented double tensiong system which means a tensioning device becomes obsolete resulting in a lowered risk of over-tensioning.

New built-in height adjustment system in the uprights. By pushing the locking pins the height can be adjusted for tall gymnasts

The bars are adjustable too the NEW FIG heights as follows:

- High bar: 230 to 280 cm (steps of 5 cm)
- Low bar: 150 to 200 cm (steps of 5 cm)
- Width: 110 to 195 cm (continuously)
