T-base above ground volleyball post socket

Details

T-bases provide an "above ground" socket for SRX volleyball posts in situations where the floor slab cannot accommodate a deep socket.

The T-bases have non-marking anti-slip rubber feet to protect your sports floor.

A traditional gamespost anchor is required to be set into the slab to secure each T-base against the floor - this is available at additional cost and may require a bushing cover to be set in the floor above that anchor. The anchor is supplied with a gamespost anchor to attach the T-base to the anchor.

Sold individually, so two T-bases are needed for a pair of SRX volleyball posts.
