Club model high bar / low bar

Details

Ref. 272A high bar with ultrasonically tested stainless steel bar and single cable system.

Adjustable between:

- 1.5m - minimum
- 2.75m - maximum

This high bar can also be made to any special height for low training practice over a U-shaped pit

This club model high bar has telescopic uprights but each time adjustment is made, the cables must be re-adjusted. This bar is therefore designed to be left at your chosen height or adjusted infrequently. For situations where frequent adjustment is required, we recommend our height adjustable training high bar.
