

## Club model high bar / low bar

## **Details**

Ref. 272A high bar with ultrasonically tested stainless steel bar and single cable system.

Adjustable between:

- 1.5m minimum
- 2.75m maximum

This high bar can also be made to any special height for low training practice over a U-shaped pit

This club model high bar has telescopic uprights but each time adjustment is made, the cables must be readjusted. This bar is therefore designed to be left at your chosen height or adjusted infrequently. For situations where frequent adjustment is required, we recommend our <u>height adjustable training high bar</u>.
