Judo mat frame system

Details

If your dojo will have the matting permanently in place you may want to consider purchasing a frame to hold the mats tightly together. We manufacture our frames in-house to any dimensions you require, so if you are limited for space you do not need to be limited to a square as we can accommodate any size rectangle.

The frame is upholstered and cushioned in seal grey or blue polypropylene carpet and is approximately 30mm high to ensure the edge is below the level of the judo mats.

The frame is supplied with nylon webbing straps with VELCRO® Fastener ends which link the opposite sides of the frame together underneath the mats which are tightened and secured to enable the mats to be held in place.

As standard the frame is not fixed to the floor of your facility, but if the frame will be permanently in one location then we can screw fix the frame to the floor with brackets.

The frame is supplied with four corners and interlocking straight sections. When ordering, please order the correct linear meterage you require and we will contact you to confirm the length and width of your matting area prior to manufacture.
