

# Junior Gym Component - Fibreglass rail

## Details

These rails are not "toy construction" - they are made to the same standards in the same factory by the same people who make our FIG approved asymmetric bars. The fibreglass core is veneered in real timber to provide a cushioned sprung rail to provide shock absorption to children's joints. The diameter is less than our standard asymmetric bar rail and the fibreglass is springier to suit smaller hands and lighter gymnasts.

Continental's range of Junior Gym equipment is modular so you can buy a basic element and then add components to enable you to build the different elements in the range. To enable you to select any additional components the table below shows the number of each component in each element:

	<b>Double rebounder</b>	<b>Single rebounder</b>	<b>Uneven bars</b>	<b>High bar</b>	<b>Parallel bars</b>	<b>Ring-frame</b>
Base rails	2	2	2	2	2	2
Upright outer frame	2	1	2	1	2	1
Short inner upright	4	2	2		4	
Long inner upright			2	2		
Ringframe inner upright (no ring or strap)						2
Veneered fibreglass rail			2	1	2	
Bungee cables with fittings	2	1				

Padded bungee cover	2	1				
Rebouder rail (solid timber) with brackets	1	1				
Ring and strap						2
