

Handball goal floor anchors

Details

These handball anchors are installed in the finished floor and provide a clamping brackets to secure the freestanding IHF handball goals when in use. The socketed version of IHF handball goals requires sockets and not anchors.

Two anchors per goal (four anchors for a pair of goals) are necessary to secure the goals, however to comply with IHF requirements, four anchors per goal (eight anchors for a pair of goals) are necessary.

The price includes installation by Continental's technicians. Please note the polished metal disc remains set into your finished floor - we can set these into timber or vinyl floors.

Price is PER ANCHOR and an "Area Charge" is applied to your basket to cover the cost of our technician's travel to site.
