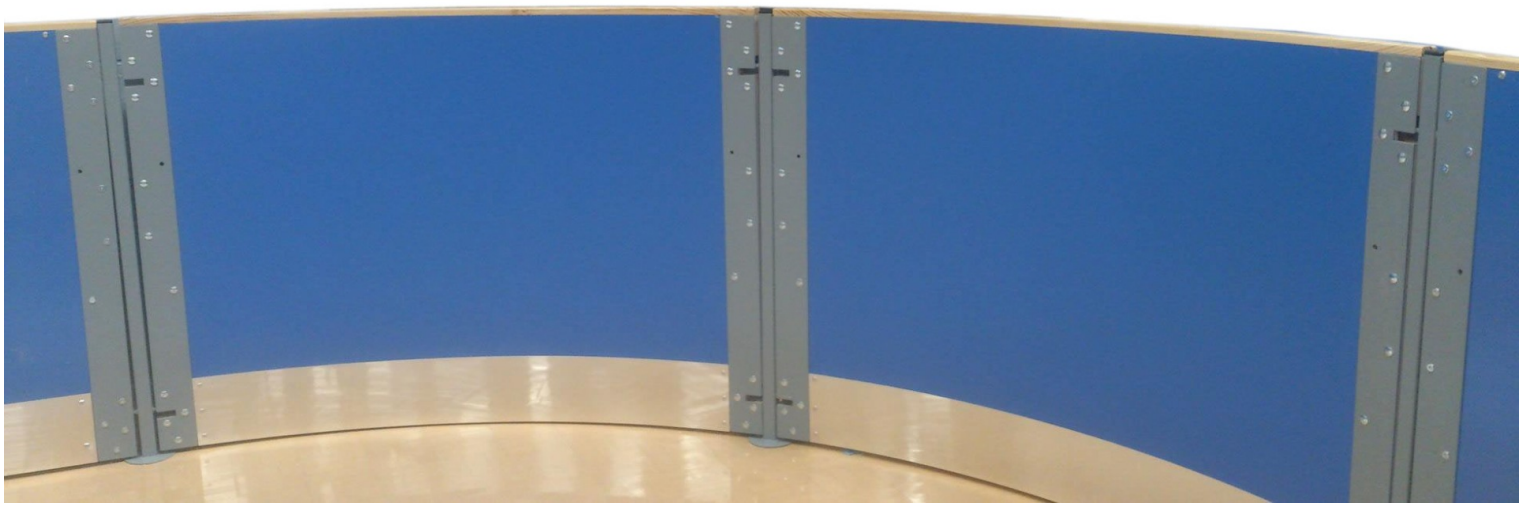
Curved rebound screens



Details

These curved rebound screen sections are perfect for roller hockey rinks to enable compliance with the recommended court shape so that the puck does not get trapped in a 90 degree corner

Manufactured in the same way as our standard rebound screens but curved to form a 2.3m radius, each 90 degree corner section is comprised of 2 boards with an intermediate post.

The boards are removable and are hung on removable posts in exactly the same way as our straight sports hall rebound boards.
