

Global Airtrack - PERFORMANCE

Details

The Global Airtrack PERFORMANCE series is ideal for juniors and adults in performance situations in gymnastics clubs, display teams and high level acrobatic situations.

The PERFORMANCE model has a thickness of 300mm to allow larger and stronger gymnasts who require an extra powerful rebound to use the track for higher level activities.

All models of the PERFORMANCE Global Airtrack are manufactured with a double-wall fabric to give a durable track with excellent rebound. This technology gives an even surface and consistent pressure without constant air supply.

The Global Airtracks feature:

- Extra reinforcement on all corners, top and bottom
- Soft VELCRO® fixed to all sides to allow multiple tracks to be used to form longer tracks or areas using a VELCRO® fastener.
- Strong handles on both sides of the Airtrack make handling and moving the track easy. The handles are self-coloured to complement the track
- Three different valve systems to enable use with most blower inflators

Length

The PERFORMANCE model of the Global Airtrack is available in three lengths

- 7.5m
- 12m
- 15m

Almost every jump is possible on the Global Airtrack PERFORMANCE - from standing jumps such as backflips through to the most complicated of competition tumblers. The track has a rebound of exceptional quality so it is also ideal for combination moves. The number of linked moves depends on the length of the track. Typically on a 7.5m track, 3 to 4 jumps can be made in combination

Depth

The PERFORMANCE model airtracks are all 300mm thick

Width

The PERFORMANCE models airtracks are available in two widths depending on the length:

- 7.5m and 12m tracks are 2m wide
- 15m tracks are 2.8m wide

These width provide a good level of safety for combination and higher level jumps

Colours

The PERFORMANCE model airtracks have a BLUE top with GREY sides and centreline

PLEASE NOTE: The Global Airtracks are not supplied with a blower which must be purchased separately. You can use either the Hitachi blower or the Elephant blower shown to the right
