Cricket mat transporter

Details

This storage and transporter unit for cricket matting accomodates two lengths of cricket matting.

Features:

- Four heavy duty non-slip swivel castors
- Aluminium poles with handles to accomodate two cricket mats
- Accomodates 2m wide mats
- Can be used with or without timber storage creels

The transporter unit can be used to transport and store two cricket mats.

The transporter is supplied with two aluminium storage poles which can be used to store the mats, however we strongly recommend the transporter is used with timber cricket storage creels which are available at additional cost. The benefits of storage creels:

- Protects mats by preventing them being rolled too tightly
- Can be removed from the transporter poles enabling rolled mats to be stored on creels in the store room meaning one transporter can be used for more than two mats

PLEASE NOTE: Continental cricket creels delivered before March 2020 are not compatible with this transporter so new creels must be purchased to suit the transporter if you wish to use creels.
