Olympic weight plates - urethane

OFTS411UX

Details

Urethane Olympic weight plates are more durable than their rubber counterparts and still boast the same great features.

The Urethane Olympic Weight Plates have a triple handle design which allows for improved grip and greater handling. This design also allows for a variety of other exercises.

Integrated separators create a gap which allows easy access to grip the plates when putting on, or taking off, the bar.

The black finished steel inner ring means the plates slide onto the weight bar or storage racks with ease, and also protects the outer rubber plate from any damage.

The bold weight indicator insert enables easy and quick identification of the weight in KG.

Available and sold individually (i.e. if you require a pair of plates of a specific weight you should add the quantity 2 to your basket) and also in sets:

- 1.25kg
- 2.5kg
- 5kg
- 10kg
- 20kg
- 25kg
- SET of incremental plates:10kg comprising 2x2.5kg, 4x1.25kg
- SET of 160kg: 2x25kg, 2x20kg, 2x15kg, 2x10kg, 2x5kg, 2x2.5kg, 4x1.25kg
- LIGHT SET for plate loaded machines (100kg)
- MEDIUM SET for plate loaded machines (200kg)
- HEAVY SET for plate loaded machines (300kg)

PLEASE NOTE: Due to the varying diameters of these plates, they should not be used in exercises in which

the bar, and / or weight plates are dropped, or lowered to the floor in a less than controlled manner. For exercises like these we recommend Olympic Bumper Weight Plates as they have the same diameter, and therefore will disperse the force of impact evenly, reducing the risk of damaging the floor or the plates.
