

# Rubber crumb bumper plates

OFRCBPXX

## Details

Rubber crumb bumper plates are suitable for use in all free weights and weightlifting environments.

These bumper plates are specifically designed to withstand rigorous use of Olympic weightlifting and powerlifting training..

The rubber crumb material is made from EPDM recycled rubber which creating a bumper plates that is extremely durable. Within the rubber crumb material colour coded rubber fleck which matches the industry standard weight increment colours is mixed with the material to help identify the plates easily within busy gym settings. Rubber crumb bumper plates reduce impact and noise which makes this plate ideal for a variety of gym environments.

Importantly, our Rubber Crumb Bumper Plates have been performance tested to confirm their impact absorption and ability to withstand to repeated drops over a long period.

The diameter of each weights of rubber crumb bumper plates is 450mm with the different weights resulting in varying thickness of plate This ensures the load is spread over all the weights when the bar is lowered the ground reducing the risk of damage to the plates and the floor.

- Easy weight identification from colour-coding:
  - Grey - 5kg
  - Green - 10kg
  - Yellow - 15kg
  - Blue - 20kg
  - Red - 25kg
- 450mm diameter
- EPDM Construction
- Sold as single plates and as a set of two of each plate to make a 150kg set (2x5kg - 2x10kg - 2x15kg - 2x20kg - 2x25kg)
