Coloured urethane bumper plates

OFFW17UXX

Details

Urethane Olympic Bumper Plates feature extremely high abrasion resistance, which means the plates will acquire far less scratches, scrapes, knocks, dents or marks than their rubber counterparts.

Urethane material will not mark or stain any other equipment, ensuring your facility is not marked as rubber plates can do.

Harder than rubber, these plates are far less prone to bending, denting or warping.

The 450mm diameter of each plate means that the impact is spread throughout many plates. This allows for Olympic style lifting (overhead and dropping). The urethane material takes colour much better than rubber and will continue to brighten up your gym long after the rubber equivalents have faded.

The plates are available individually or in a 150kg set of 2 of each weight plate:

- 5kg (black)
- 10kg (green)
- 15kg (yellow)
- 20kg (blue)
- 25kg (red)
- 150kg set: 2x5kg - 2x10kg - 2x15kg - 2x20kg - 2x25kg

Another added benefit of urethane over rubber is it is odourless, meaning your gym stays fresh.

- Hard, durable urethane material
- Odourless
- Will not mark any other equipment
- Bold bright colour scheme
- Long lasting
