

Drama room curtains

Details

We manufacture and install bespoke curtains for a wide range of uses.

We make bespoke bracketry to suit your room and can use trackway curves to create curtain layouts to suit your requirements.

We offer a wide range of five different fabrics with varying properties in a huge range of colours:

- **Trevira** - a lightweight polypropylene available in a range of colours - this is excellent in front of mirrors or to block viewing from galleries or similar areas
- **Premier blackout** - a black cotton fabric that is impermeable to light and necessary for situations in front of direct bright light
- **Dimalan** - a high opacity dimout fabric featuring a black backing fabric woven to a coloured facing fabric
- **Mercury** - a dimout fabric available in a wide range of colours
- **Wool serge** - the best fabric for drama curtains - used extensively in theatres, this 100% wool fabric is available in a range of colours and featuring sound absorbing / deadening acoustic properties

For full colour ranges and details on these fabrics please refer to our [fabric colour range](#)

The images above show a full height Black Wool Serge curtain stored on a wall that can be pulled out around a series of curves to create a rectangular full enclosure.

Please contact us to discuss your requirements and for a bespoke quotation.
