

# Cableless low training bar

01273C01AA

## Details

This cableless training bar has uprights bolted directly into a solid floor. This bar is perfect for mounting over a U-shaped training pit but can also be used at floor level for smaller gymnasts

The galvanised steel uprights feature an easy-to-adjust height adjustment facility to provide heights from 300mm to 1300mm in 100mm increments.

The training bar is available with your choice of either:

- an ultrasonically tested polished steel high bar
- a timber veneered fibreglass uneven bar

The lack of cables provides more freedom for the coach to be able to provide spotting and coaching without the risk of tripping over cables.

**PLEASE NOTE:** This item must be bolted directly to a suitably solid floor. You must be able to drill at least 100mm into your floor slab to accommodate this apparatus. Four fixings per upright to suit a solid floor are included with this item ready for self-installation.
