Freestanding mobile sports hall rebound boards

Details

Continental's modular freestanding rebound screen system provides the ability to divide a sports hall into any number of zones with additional flexibility compared to our standard post fixed system:

- **No sockets required** - perfect for retro-fitting into halls with sub-floors unsuitable for sockets
- **Re-positionable** - not restricted to the location of sockets to divide a hall in half - can be used to divide off any size section of a hall
- **Flexible division shape** - 90 degree corner units can be incoprorated so that rectangular sections of a hall can be separated or fully enclosed areas (perhaps for a creche or kids play area) can be created within a larger hall
- **Easy, secure, interlocking system** - each panel has a "male" and a "female" end to allow the panels to easily and firmly interlock

The modular system comprises the following:

- **Standard full panels** - interlocking panels each 1520mm long
- **Infill panels** - shorter panels to create an exact length to suit the run of panels required
- **Gate panels** - incorporating hinged panels to provide access from one side of the run of screens to the other
- **90 degree corners** - used to change the direction of a run of panels through 90 degrees to enable areas of a hall to be sectioned off (available in right or left hand corners)

The panels feature:

- **Coloured impact panels** - 15mm thick laminate faced impact boards on sides and top in a wide range of colours: Freestanding Rebound Board Colour Chart
- **Sturdy impact resistant** - Non-marking, hi-grip rubber feet to hold the panels firmly in place when impacted by players
- **Easily moved by one person** - Two integral wheels on each panel so the panel can be lifted and moved easily by one person
- **Safety features** - Steel mesh panels at both sides of each unit to reduce the risk of mis-use by children getting trapped inside during assembly
- **Robust steel sub-frame** - Epoxy powder coated steel sub-frame

- **Integral division net storage** - Storage area on top of each panel to locate the bottom edge of a coincident division curtain
- **Padded panel option** - Side panels can be manufactured with PVC covered foam padded panels to enable safe childrens play / creche / softplay areas to be created in a sports hall or activity room

Standard panel measurements:

- **Length:** 1520mm
- **Height:** 1234mm
- **Width:** 630mm
- **Storage ledge depth:** 210mm
