SAM School 3x3

Details

The SAM School 3x3 is the 3x3 version of the standard SAM School. An ideal robust, commercial quality portable shooting station / mini-basketball goal with black padding and steelwork for the "urban" look preferred for 3x3.

Unlike "toy" goals that have water or sand bases, the substantial steel ballast in the SAM School 3x3 makes the goal stable for insitutional play.

These commercial quality portable basketball goals provide opportunities for shooting practice and mini-games in schools and leisure centres when the regulation sizes of the full size SAM units are not necessary.

The units are commercial quality, practice, portable, height adjustable basketball backstops:

- ring heights (cm) 140, 160, 180, 200, 220, 240, 260 (JUNIOR HEIGHT), 280 and 305cm (STANDARD HEIGHT)
- compact storage space (205 cm) including ring and net
- safety padding on front and sides
- including 2 swivel wheels at the front and 2 floor supports
- spring-assisted height adjustment
- easy to move around without damaging floors
- extremely stable thanks to heavy base frame
- can be used outdoors or indoors but is not designed to be left permanently outdoors

Each unit requires one floor anchor to ensure stability when in use.
