Indoor athletics throwing walls

Details

We manufacture and install throws walls for indoor athletics training. These are supplied in accordance with the Sport England design guidance for athletics.

Comprising a layer of impact absorbing and acoustic deadening rubber material bonded to the wall, we provide timber backed dense foam panels with a softer foam thicker target area.

At the base of the wall is additional cushioned matting to allow objects to fall to the ground without damage to the track surface

These walls are designed bespoke to your facility so please contact us to discuss your requirements and for pricing
