

Traverse wall panels - Indoor

Details

These traverse panels are ideal for use by primary schools and with lacquered timber panels they are for indoor use only

Manufactured from 18mm thick plywood, the panels are supplied as a pack of 6, to provide three top panels and three base panels.

Each panel has 8 junior climbing holds made in a range of shapes and colours - these holds are comfortable for young children's hands.

The panels measure:

- Width: 1,200mm
- Height: 400mm
- Overall: With a 100mm gap between them, a set of six creates a wall 3.8m long

Fixing:

- The bottom panels are fixed so their tops are 600mm above the floor which means a safety surface is not necessary.
- The top panels are mounted so their tops are 1200mm above the floor (or can be lowered to suit smaller children depending on the target age group)
