Gladiator "in-ground" basketball goal

24RS65670

Details

The Gladiator is a heavy-duty, zinc finished in-ground basketball unit that was designed to survive in any inner city environment. This unit was supplied to the English and Scottish Outdoor Basketball Initiatives and can be found in many outdoor courts all over England and Scotland.

The Gladiator unit includes a steel backboard with polycarbonate fascia measuring 120cm x 90cm with silver finish and red and blue details.

With a 45cm solid galvanised steel ring and 10cm galvanised square pole with 5mm thickness, this unit can withstand a load of 490kg. The unit projects 1.2m and is complete with a white 12-loop nylon net and 8 year anti rust warranty.

This in-ground unit is EN-1270 certified.

PLEASE NOTE: Installation (NOT INCLUDED) requires setting the unit into a 1m x 1m x 1m cube of concrete under ground level. The unit is available in two types:

- **PERMANENT - WITHOUT ground socket** - for concreting permanently directly into the ground
- **SOCKETED - WITH ground socket** - the socket is set in the concrete and the unit can be lowered into the socket using mechanical lifting equipment. The unit should not be considered as removable on a day-to-day basis but can be removed for periods if necessary.

The unit weighs 160kg
