

# Trampoline stability spreader plates

2308TSPXXX

## Details

Continental's trampoline and end deck stability spreader plates are designed for two purposes:

- Reduce the risk of trampolines moving around lacquered timber sports hall floors when being bounced on
- Reduce the risk of trampoline feet causing indentations in cushioned vinyl sports hall floors

Both types of spreader plates are supplied as a set of four. The plates feature:

- 600mm x 600mm x 24mm thick
- Melamine faced MDF construction
- Incorporate a lacquered timber "stop" to hold the trampoline foot in place
- Routed handle to help lift the plates
- Anti-slip fabric base to protect lacquered floors and to limit movement

### Trampoline spreader plates

The lacquered timber "stop" is offset so that the trampoline feet are central to the plate when in use. The "stop" is located on the outside of the trampoline foot to restrict outward movement.

### End deck spreader plates

The lacquered timber "stop" is designed to be located outside the wheels on the end deck. This allows small to and from movement of the end deck wheels and as the end decks are fixed to the trampoline no additional "stop" is required.

SKU	Options	Available Colours
2308TSP01A	For trampolines	N/A
2308TSP01B	For end decks	N/A
