

ContiTrackAir

240CS1X030

Details

Continental's signature "ContiTrackAir" professional model AirTrack tumbling piste provides everything you need in an AirTrack.

The 300mm thickness permits safe use on all floors - either on top of gymnastics floor areas, on carpet bonded foam ("Tribond") rolls or directly onto smooth flat sports hall or gym floors.

With the **included blower** you can modify the air pressure to suit a wide range of users by providing a range from a slow and easy bounce for kids to have fun right up to a high pressure firm, fast, technical bounce for pro gymnasts.

The ContiTrackAir is 2.8m wide to provide sufficient space for confidence in developing new tumble runs, or space for spotters or coaches to assist in skills development.

The ContiTrackAir is available in three lengths (all 2.8m wide x 300mm deep):

- 10m
- 12m
- 15m

SKU	Options	Available Colours
