

Impulse IF93 Deltoid Raise

Details

Impulse IF93 Deltoid Raise machine

The deltoid raise is a lateral raise machine that helps users to strengthen the deltoid muscles. User selects an appropriate weight, extend their arms, and rotate the roller pad to effectively train the deltoid muscles. A larger arm roller pad helps to increase the contact area with arms and makes training more comfortable.

The lateral raise machine is specifically designed for entry level studios and commercial gyms and offers a complete functional package that is easy to maintain.

Key Features

- Larger arm roller pad increases contact area with arms and makes training more comfortable
- Adjustable height of the seat is suitable for users of different heights and arm length
- Yellow circle pivot makes it easy to choose the right training position

PLEASE NOTE: This item is delivered flat-packed and requires some self-assembly. Please contact us if you require a cost for installation and commissioning in your facility
