Climbing wall matting

Details

We manufacture bespoke matting for a wide range of purposes.

Many climbing walls have fold-up runds of mats that link together along the bottom edge. These mats are fixed in various ways, using combinations of VELCRO Fasteners, bungee toggles, eyelets etc. We can manufacture replacements to suit any situation.

We utilise foam to replicate your existing mats if you have them, or if you now want thicker, firmer, softer, larger or any different type of mats we have a solution for you.

Covered in a range of 28 colours of PVC - or even fully digitally printed with logos and graphics - we can provide exactly what you require.

Please contact us for further discussions of your requirments and so we can work out your preferred specification and provide a bespoke quotation.
