

Cricket bowling machine battery and charger

Details

This 55 Ampere Hour Sealed AGM (Absorbed Glass Mat) Battery is used to power the bowling machine in outdoor settings, or indoors if no plug is available for the mains power supply.

AGM batteries contain only enough liquid to keep the mat wet with the electrolyte and if the battery is broken no free liquid is available to leak out.

No spillage, completely maintenance free and easy to transport safely.

This battery will give up to four hours of machine use before an overnight charge is required using the supplied charger.
