Junior cricket bowling machine

Details

This NEW Junior model cricket bowling machine brings the quality and design expertise from the professional model to the junior cricket practice market providing tried and tested technology at an entry level price.

The Junior model has been designed to enable juniors to practice in the same way as their senior counterparts by bringing tireless accurate bowling for endless hours of batting practice and fun.

Like the professional machine, the Junior model has two ball throwing wheels for realistic bounce and swing. Single wheel product designs (originally developed for Baseball where the ball doesn't bounce) are not able to do this.

The machine is light (8 kg), easy to carry and set up so can be operational in a few minutes.

The Junior model will bowl a specially made junior dimpled ball at up to 65 mph - set the machine up at 16 yards for simulated high speed practice.

Selectable Electronic Random Mode will provide variation of speed (which varies length) at random which brings the competitiveness of the practice to a new level.

The Junior machine can be used anywhere as it operates from a 12 volt battery. The 22Ah 12 volt battery supplied with the machine will run for up to 7 hours (depending on speed / balls bowled).

The Junior machine is a complete package including:

- Machine
- Auto-feeder
- 12 Junior balls
- Stand
- Battery
- Charger
