

General protection netting

Details

We provide bespoke solutions using netting to stop balls and projectiles entering (or leaving) designated areas. Normally designed to stop balls leaving the playing area to protect spectators or infrastructure such as windows, we have also made nets to stop drones leaving testing facilities and many other uses including:

- Waterpolo catch nets
- Eton Fives nets
- Drone catch nets
- Indoor football training area nets
- Squash court high level divider nets

All our solutions are bespoke using different mesh sizes, different twine thicknesses, different fixing and tensioning methods - all to suit your requirements. Please contact us to discuss your project.
