

Storm Curved Treadmill

Details

The Storm Curved Treadmill has four resistance levels and seven built-in programs. Resistance on this treadmill can be changed by simply moving the handle mechanism on the support handle. With no maximum speed capacity, you can push training to the limit burning up to 30% more calories compared to standard motorised treadmills.

The curved base helps to create a better stride when running and the machine has been designed with a low-impact system designed to reduce impacts on joints. On the underside of the curved treadmill are two wheels that allow it to be easily moved around any gym space.

Training control is put back into the user's hand as the machine is fully powered by body movement meaning electricity is not required to power the curved treadmill. The belt itself is made of aluminum slats connected to a Kevlar-reinforced industrial belt so durability is not going to be an issue. This treadmill is perfect for speed, interval, and HIIT training styles.

Key Features

- Electricity not required as powered by body movement
- Curved running surface improves stride length and reduces impact on joints
- Aluminium running slats with Kevlar-reinforced backing belt provide superior durability
- Intuitive console provides 8 different types of feedback
- No speed restrictions as pace is set by the user
- Quick sprint to walk transition during HIIT workouts
- Wide running surface
