Rubber ferrule / end cap - Style 'B' - 32MM int. diameter

Details

This rubber ferrule / end cap has an internal diameter of 32mm and is designed to suit 31.8mm ERW tube

This size ferrule is used extensively on legacy PE equipment manufactured by Carrs of Nottingham, and is used on the ends of Continental's sprung timber bars parallel bar training aide.

PLEASE NOTE: This part has recently been superseded from a 54mm grey ferrule with a flat end to a 38mm long black ferrule with a curved end. The ferrule still suits the legacy PE equipment and our gymnastics equipment.
